

## Magtron Residual Current Monitoring Unit(CHCS®)

## CHCS101SM1

**Features**

- ◆ Self-check function
- ◆ Single Supply +5 V
- ◆ Positive output for ADC
- ◆ Printed circuit board mounting
- ◆ Overheat protection

**Characteristics**

- ◆ Stable accuracy
- ◆ self stimulation
- ◆ Low hysteresis offset voltage
- ◆ Short response time
- ◆ Integration frequency filter
- ◆ Compact design

**Applications**

- ◆ Appliance ground fault detection
- ◆ Solar inverter residual current
- ◆ Converter leakage current detection
- ◆ UPS and other power ground fault detection
- ◆ Electric vehicle charge station
- ◆ Single Phases differential current detection

**Standards**

- ◆ EN50178 IEC60950-1
- ◆ UL1741 VDE0126-1-1
- ◆ IEC62752 (Mode 2) & UL2231

**Select Part List**

Part Number	$I_{PN}$ ( mA )	$I_{PM}$ ( mA )	$I_M$ ( A )
CHCS101SM1-2EI	±60	±100	±20
CHCS101SM1-2AI	±300	±500	±20

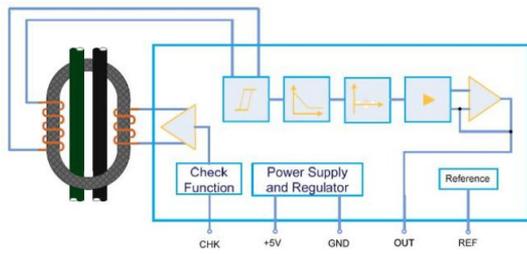

**Overview**

An important safety function of these devices is monitor of the leakage current of the entire system from Power modules or inverter against earth. A defective system can become dangerous for people or cause fires. Before it comes so far, the inverter must be disconnect from the grid. The leakage current contains DC and AC components. Therefore an AC/DC-sensitive monitoring unit is necessary. The heart of the safety device is the Magtron CHCS®, whose value is evaluated by the control system of the Power inverter.

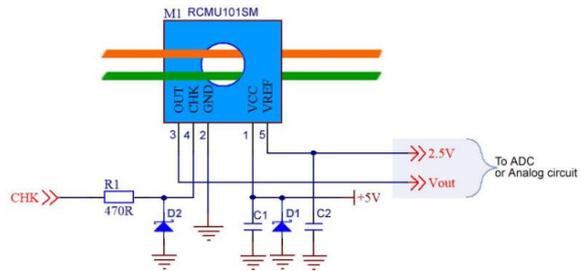

Generally protection devices with AC/DC-sensitive differential current sensors can be used everywhere, where flat or pulsating DC can develop, whose amount is permanently greater than zero.

Instruction of installation in a Pollution Degree 2 environment is available on the table below(or equivalent statement).

Application circuit

Functional block diagram

Application circuit

Note: C1/C2/D1 /D2 should be close to the current sensor's pin

CHCS101SM1-2EI Component selection reference:

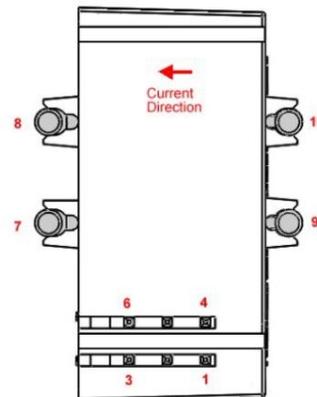

Designator	Description
C1	X7R, 10uF/16V, ±10%, 0805
C2	X7R, 1uF/16V, ±10%, 0603
D1, D2	Ruilon, TVS, SMFJ5.0A, SOD-123

CHCS101SM1-2AI Component selection reference:

Designator	Description
C1	X7R, ≧ 22uF/16V, ±10%, 1206
C2	X7R, 10uF/16V, ±10%, 0805

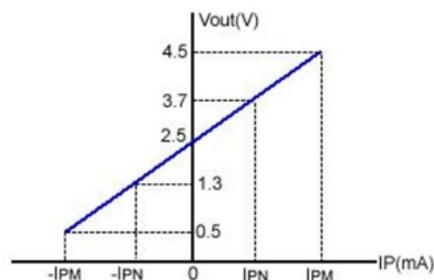

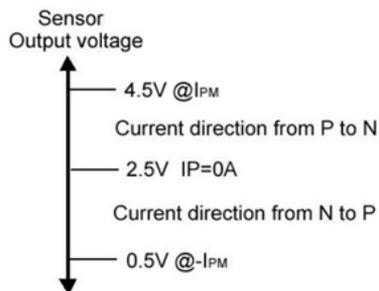

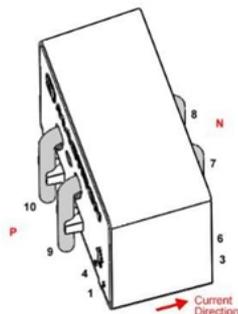

Pin Definition

NO.	Symbol	Description
3	VO	Signal output
4	CHK	Product Self-Check input ( 悬空即可 )
2	GND	Power GND
1	VCC	Power supply
5	REF	Reference voltage output
7-10	IP	Primary Current

Assembly Pin

Current direction

Relationship between IP and output voltage

**Absolute Maximum Ratings**

Parameter	Symbol	Min	Typ	Max	Unit
Supply Voltage(not operating)	$V_C$			5.5	V
Ambient operating temperature	$T_A$	-40		+105	°C
Ambient storage temperature	$T_A$	-40		+105	°C

**Isolation Characteristics**

Parameter	Symbol	Min	Unit
Rms voltage for AC insulation test, 50 Hz, 1 min	$U_d$	3	kV
Impulse withstand voltage 2/20 $\mu$ s	$U_w$	5	kV
Partial discharge extinction rms voltage @ 10 pC	$U_e$	TBD	kV
System working voltage (RMS)	$V_s$	<750	V
Comparative Tracking Index (group I)	CTI	600	V
Clearance (See drawing in page 6)	DCI	TBD	mm
Creepage distance (See drawing in page 6)	DCP	TBD	mm
Application example	-	300, CAT III, PD2	V
Application example	-	600, CAT III, PD2	V

**Other Characteristics**

Parameter	Symbol	Value	Unit
Supply Voltage(not operating)	$T_{WSP}$	260	°C
Ambient operating temperature	$T_P$	140~150	°C
Ambient storage temperature	$T_{PR}$	55~65	°C

V<sub>REF</sub> output interface internal circuit

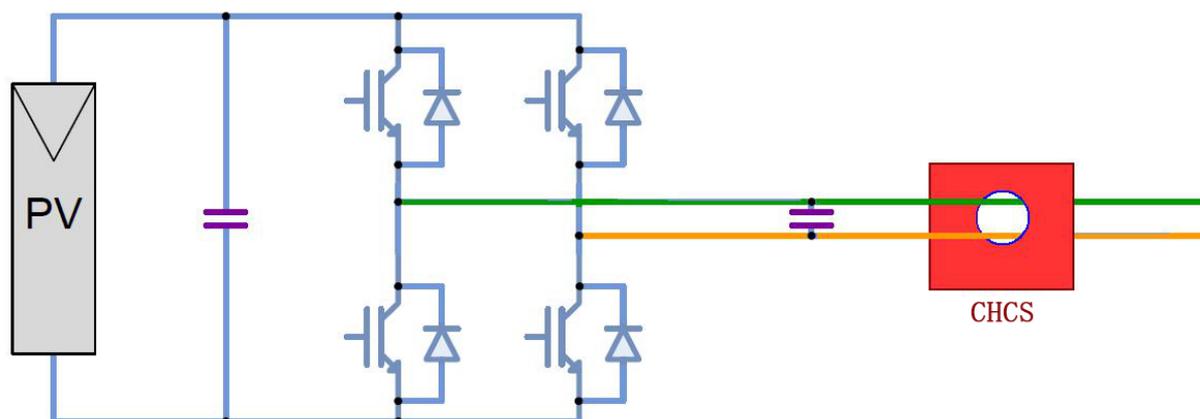

Application information

Self-check Function

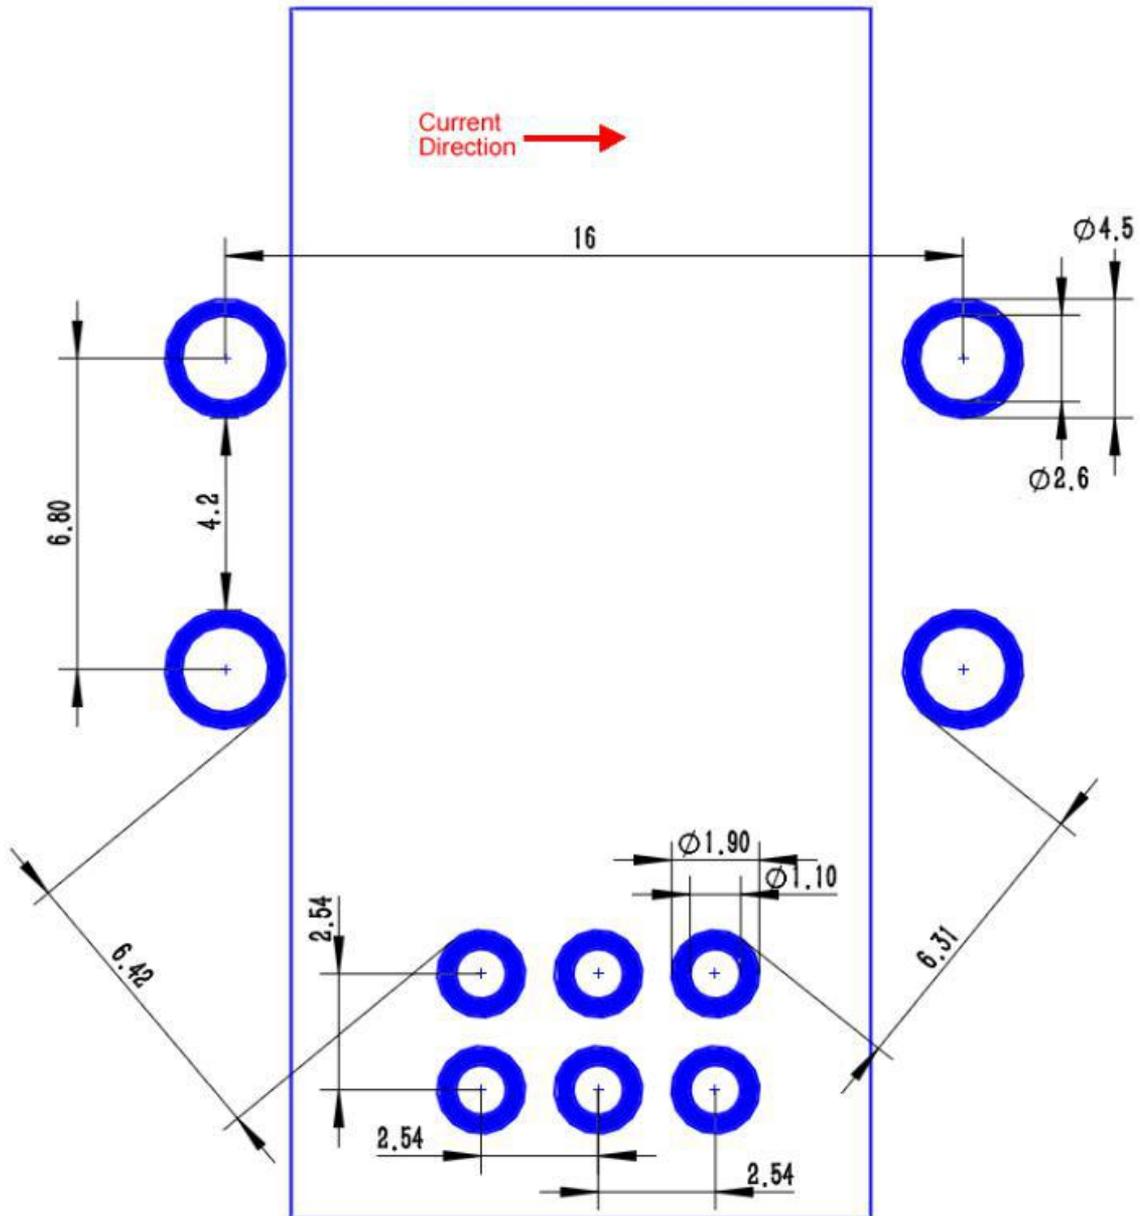

Set the CHK pin to high status. CHCS will run in self-test mode, check the out pin, equivalent to the status I<sub>p</sub> equal I<sub>ck</sub>, at this time the output has equal voltage, the detector is OK. Then sets CHK to low voltage V<sub>check</sub><0.2V. The CHCS starts to run in the residual current.

Photovoltaic Inverter Residual Current

From VDE0126-1-1, Inverters without a basic insulation (e.g. basic insulated transformer) between the grid and the photovoltaic-Generator must have a fault current monitoring unit (CHCS) installed. The d.c. and a.c. component of the fault current depend on the construction of the inverter and on the d.c. voltage of the PV-generator.

PCB Footprint

PCB Holes Secondary pins:  $\phi 1.1 \times 1.9$   
Primary Pins:  $\phi 2.6 \times 4.5$

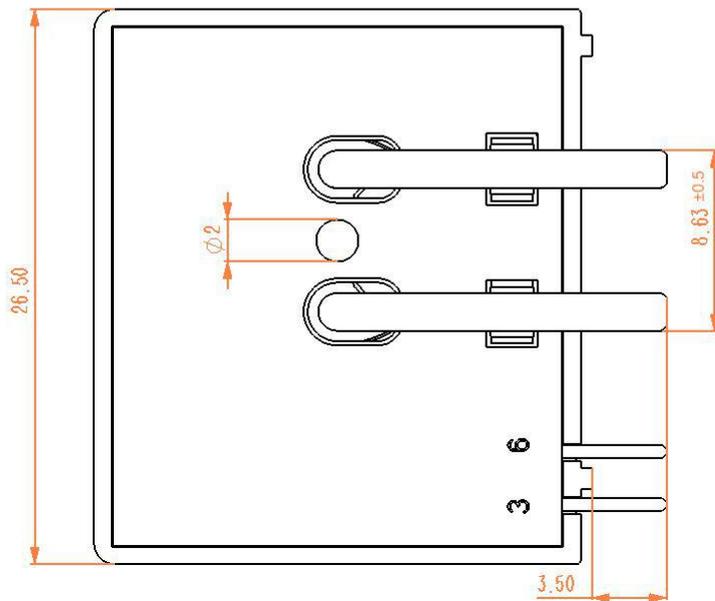

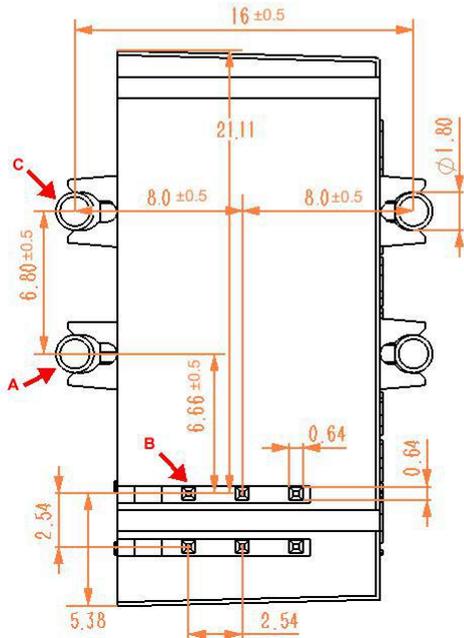

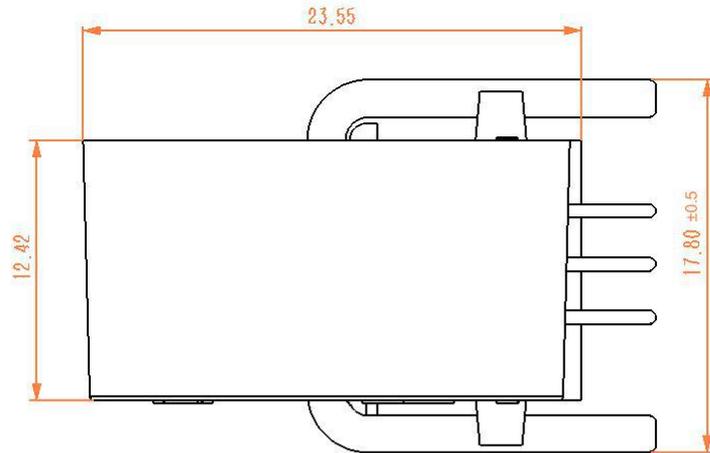

**Dimensions**

Mechanical Characteristics ( Unit : mm, Tolerance in  $\pm 0.2$ )

	DCI	DCP
A-B	7.2	--
A-C	5	$\geq 5.5$
C-D	--	$\geq 8.5$

D is secondary inside the transducer

On the customer's PCBA		
	DCI	DCP
A-B	6.4	6.4
A-C	4.2	4.2
